## insight into eyesight

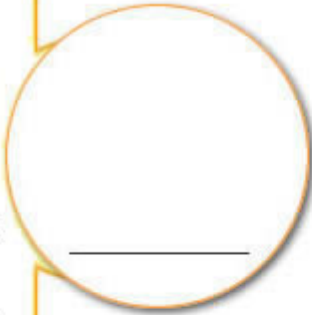

Name: \_\_\_\_\_

### Why do we have two eyes?

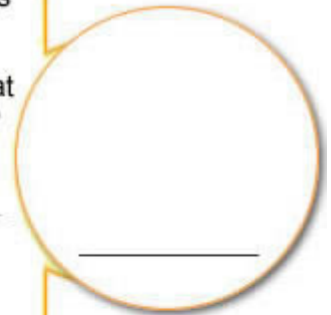

Can you link the animal to the reason why it has two eyes??

Draw the animal and write its name in the circle next to the explanation which makes most sense.

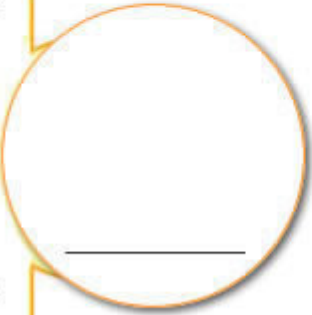

I need two eyes set at the side of my head so that I can have a wide field of vision. This is important because I need to be able to see all around in case there is any danger!

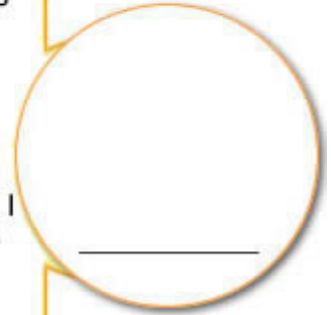

I need two eyes set wide apart at the front of my head so that I can see in 3D and work out the distance to my prey from a great distance. This is called stereoscopic vision.

I need two eyes set quite far apart towards the side of my head to give me a wide field of vision and some 3D vision so that I gauge the distance to the food in front of me.

I need two eyes set at the front of my head so that I can see my prey in 3D and work out the distance to my prey before I pounce. This is called stereoscopic vision.

score =

This page is designed for printing and filling in by hand.  
Draw your animals, name them, then ask your teacher to mark it.
