insight into eyesight

Name: _____

Long and Short Sight

Can you correct these vision defects ?

Draw the correct shape lens in front of each eye to correct the problem.

Both of these diagrams show eyes which need their vision correcting. One is **long-sighted** and the other **short-sighted**.

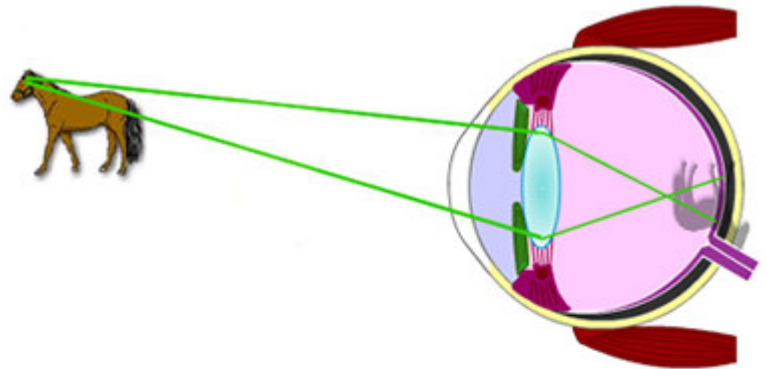

To correct the vision an optician can choose a lens which helps the eye create a clear image on the retina.

The two main types of lens are shown below.

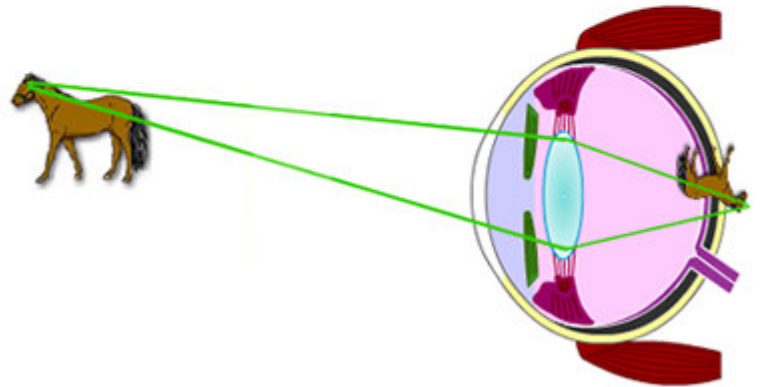

For each diagram:

1. Choose the type of lens which will correct the vision and DRAW that shape of lens in front of the eye.
2. Write the name of the vision defect in the space provided.

This is called _____

This is called _____

score =

This page is designed for printing and filling in by hand. Draw your lenses, name the problem, and ask your teacher to mark it.
